
CONTENTS

Introduction	iii
1 Metric spaces	1
1.1 Metric spaces	1
1.2 Open balls, closed balls and spheres	3
1.3 Open sets, closed sets and neighbourhood	4
1.4 Interior, exterior, boundary and closure	9
1.5 Distance between two sets, Diameter	12
1.6 Equivalent metrics	13
1.7 Finite metric products	16
1.8 Continuity	18
1.8.1 Continuous Mappings	18
1.8.2 Uniform Continuity	19
1.8.3 Lipschitz and Contraction Mappings and Applications	20
1.9 Isometry	21
1.10 Normed spaces	21
2 Complete metric spaces	29
2.1 Convergence in a metric space	29
2.1.1 Convergence and limits	29
2.2 Cauchy sequences and completeness	33
2.3 Contractive mapping theorem	37
3 Topological spaces	40
3.1 Topology, Open sets and Closed sets	40
3.2 Neighborhoods	43
3.3 Comparison of topologies	46
3.4 Base and Neighborhood base	47
3.5 Interior points, Adherent points, Accumulation points, Isolated points, Boundary points, Exterior points and Dense sets.	50
3.5.1 Interior points	50
3.5.2 Adherent points	52
3.5.3 Accumulation points	54
3.5.4 Isolated Points	54
3.5.5 Boundary points	55

3.5.6	Exterior points	56
3.5.7	Dense sets	56
3.6	Separated Spaces (Hausdorff Spaces))	58
3.7	Induced topology, Product topology	59
3.7.1	Induced topology	59
3.7.2	Product topology	63
3.8	Convergent sequences	66
3.9	Continuous applications	71
3.10	Open and closed maps	75
3.11	Homeomorphism	76
4	Compact Spaces	78
4.1	Compactness in Topological Spaces	78
4.1.1	Compact Spaces and Sets	78
4.1.2	Properties of Compact Topological Spaces	80
4.2	Compactness in metric spaces	85
4.2.1	Precompact spaces and sequentially compact spaces	85
4.2.2	Properties of Compact Metric Spaces	86
5	Connected Spaces	91
5.1	Connectivity in Topological Spaces	91
5.1.1	Connected Spaces and Subsets	91
5.1.2	Properties of Connected Spaces	93
5.1.3	Connected components, locally connected spaces	96
5.1.4	Path-connectedness	98
5.2	Connectedness in Metric Spaces	99
5.2.1	Definitions and properties of connectivity in metric spaces	99
	Bibliography	100
