Final Mini Project

The mini-project will be evaluated on **April 28 at 9:30 AM during the lab session**. The source code and written report must be submitted via Moodle no later than **May 1, 23:59**.

Project Objective

This mini-project is a **synthesis of all laboratory sessions**. You are expected to integrate and apply all previously learned concepts:

- Development of a full-stack website (client and server side) using HTML, CSS, JavaScript, PHP, and SQL
- Local web server deployment using XAMPP / Apache
- Network configuration and IP addressing
- Accessing a web application from multiple devices
- Port configuration and server access management
- Firewall security and access control
- Responsive web design using CSS

Deliverables

Each student must submit:

- Live demonstration during the evaluation session
- Complete source code of the web application
- Written report (PDF format) uploaded on Moodle
